## Grape Bud Survival

### February 15, 2010 (West)

### February 8, 2010 (East)

Grape bud sampling to establish winter survival is part of a – Ontario Grape & Wine Research Incorporated funded Winter Injury project. The tables in this article, report the sampling results based on the bud collection in the west end regions during the week of February 15<sup>th</sup>, 2010 and in the east end regions during the week of February 8<sup>th</sup>, 2010. However, the percent alive may vary up or down from the last sample due to the variation in the samples taken. The tables below are based on multiple samples and multiple sites within in area for each cultivar.

The Parkway zone runs approximately 1 km along the west side of the Niagara River from Niagara-on-the-Lake to Queenston; the Lakeshore zone is approximately 1 km south of the lake from the Niagara River to Grimsby; the Central zone continues south of the Lakeshore zone to the base of the escarpment; the Bench zone starts at the south side of the Central zone to the brink of the escarpment and the Vinemount zone runs south of the Bench Zone.
