Follow these steps to self-screen using the test kit.
1. Sanitize hands and lower mask to just below nose.

2. Open the sterile swab pouch, tilt head back slightly, and insert swab into one nostril about one inch. Rotate swab around nostril at least 4 times. Repeat in opposite nostril using the same swab.

3. Open tube, insert swab, squeeze the tube and circulate swab in the liquid more than 10 times.

4. Press nozzle cab tightly on the tube.
Apply 4 drops of fluid onto test device.

Sanitize hands.
Wait 15-30 minutes.

Interpret results:

1 line at “C” = negative

2 lines at both “C” and “T” = positive (regardless of how faint either of the lines are)

1 line at “T” or no lines = invalid
