

## Configuring BrockWiFi on Macintosh

The following instructions are for setting up BrockWiFi on a Macintosh computer. Before you continue, you will need to know what version of Mac OS you are running. To find the version you are running, follow the instructions below.

- Click on the Apple symbol in the top left corner of your screen
- Click on About This Mac
- A dialog box will appear, under the title Mac OS X there will be a version number. If the version is 10.5.x then you are running Leopard.

Setup Instructions for OS X 10.5 (Leopard)

Open System Preferences from the Dock or the Apple Menu

Click on the *Network Preference Pane*.

Select the AirPort connection on the left panel. Under Network name, use the pull down menu to select "BrockWiFi".

Fill out the form with you Campus AD/Portal credentials. You will want to keep the "Remember this network" box checked to enable access the next time you are using wireless. Otherwise, you will have to go through this process each time you connect.

Due to a certificate issue, you will next be presented with three security screens. Follow the screenshots below and select the Always Trust and Always Allow buttons to have you computer allow these security settings to be memorized.

Click *Show Certificate* on this screen. Select the *Always Trust* checkbox.

By selecting Always allow your computer will not need to ask you permission to use the Self Signed Certificate above to create a secure connection to Brock's wireless network.

NOTE: Since your login information is being stored on the local drive, your friends will be able to log onto the wireless network as you if you loan them your laptop. You will also need to change your password if the laptop has been stolen or lost to ensure security access on your account to the secure wireless network.

If you have problems authenticating on the BrockWiFi Wireless Network, please contact the ITS Help Desk 905-688-5550 x4357
