Second annual EEG/ERP analysis workshop

Dr. Sid Segalowitz and James Desjardins held the second Annual Workshop on Event-Related Potential Techniques May 25-29, 2015, with over 30 attendees. The program followed the same format as the inaugural meeting in 2014, covering a review of traditional ERP methods and theory, a hands-on introduction to EEGLAB, ICA, statistical bootstrapping of ERPs, and a final day introducing how to utilize SHARCNet, a platform for high performance computing, for ERP analyses.
