

# Green Onion

Kincho scallion seeds produce a standard green onion for summer and fall production, with dark-green leaves and tall, straight, single-stalk stems that do not bulb. Kincho maintains a uniform thickness along its whole length. The flavour is bright, and the texture is crisp, so it's just right for slicing. Kincho is a good choice for winter gardening!

**Season: Cool season**

**Exposure: Full sun**

**Difficulty: Easy**

## Growing

Direct sow seeds two weeks after the last frost date. Seeds can also be started indoors. Sow 3 seeds 5mm-1cm ( $\frac{1}{4}$ - $\frac{1}{2}$ " ) deep in each cell of a 72-cell tray. Transplant as a clump, spacing each 15cm (6") apart in rows 45-75cm (18-30") apart. Scallions can be spaced at 2-5cm (1-2") apart in rows 15cm (6") apart.

Fertile and well-drained soil in full sun is essential. Keep moisture high in the top 20-30cm (8-12") of soil.

## Saving

Wait for seed heads to dry. Most of the flowers will also be dry. Gather the heads in a paper bag. Most of the seeds will fall out on their own. Shake the bag to free the remainder of the seeds. Put the seeds into a dated and labeled envelope and return to Brock!
